windmills

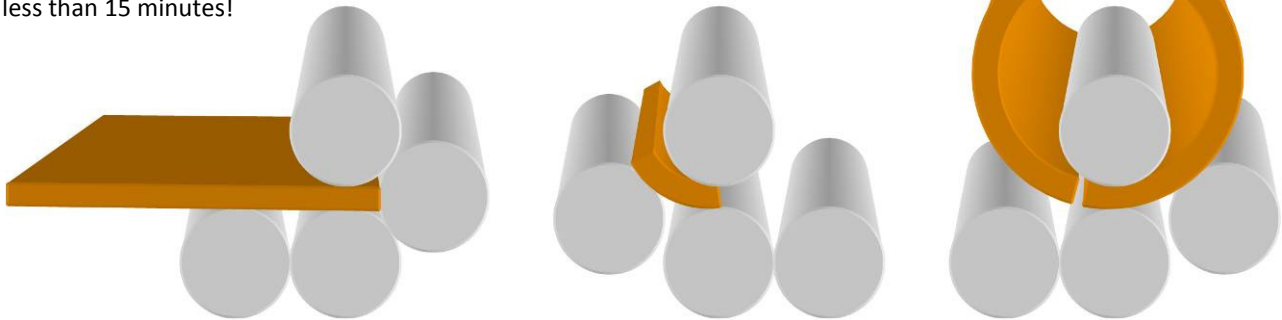

Wind Energy

THE EASIEST, THE FASTEST AND THE MORE ACCURATE!

It is the **MG Windmills System**.

Take Your plate, put it inside the MG Machine and it's done! Roll a cone in less than 15 minutes!

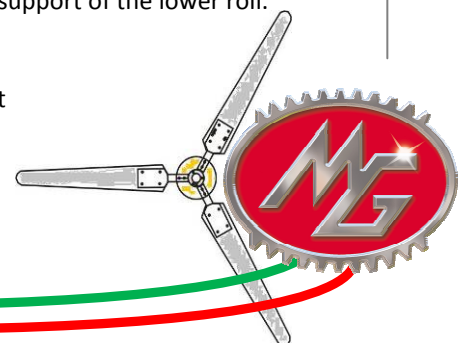

DIRECTLY FROM THE PLATE TO THE WIND TOWER!

Roll a cone has never been so easy, ROLL YOUR CONE IN LESS THAN 15 MINUTES! Choose from 3 or 4 rolls and bend! Let's take a look of some advantages of the 3 rolls and the 4 rolls machines.

Three rolls: A three rolls MG machine is better when the thickness of the plate is very high. On this kind of machines is not possible to install a CNC Control, because it doesn't have the fourth roll, to control the pinching. It is very competitive in terms of price.

Four rolls: A four rolls MG machine is famous because it is very user friendly, it is possible to install a CNC Touch Command Control that let you bend every part that you want. It is advisable for high-productivity systems, cause it is very fast and accurate. The squaring system is already included in the machine, thank to position of the side rolls and the support of the lower roll.
